**Important:** This User Manual (On CD) has been designed to provide you with complete product knowledge. The following are instructions on how to make use of this manual effectively by launching applications and help files, as well as accessing relevant web sites, where applicable, via specially prepared links.

- To launch applications, Help files or to access relevant web sites, click the blue text, or whenever the symbol or appears on the object or text.
- For best viewing, this PDF is by default set to “Fit Width” so that all the contents on every page is visible. If you are unable to read the text clearly, press Ctrl + <+> to zoom in or Ctrl + <-> to zoom out. To view full screen, press Ctrl + <L>.

**Note:** To access the applications and Help files, you must first install the manual and the applications in your computer. Otherwise, you will receive error messages. When you click a link to launch a program, a dialog box may appear to inform you that Adobe Acrobat is going to launch the application. Click the All button to run subsequent applications without the message appearing again. To access linked web sites, your computer must be connected to the Internet.

Introduction

High Definition Digital Audio Entertainment

Thank you for purchasing Sound Blaster Audigy 2, the next generation Creative audio product with exciting new features and enhanced audio processing architecture.

This User Manual (on CD) guides you through the installation and usage of Sound Blaster Audigy 2. Sound Blaster Audigy 2 consists of the Sound Blaster Audigy 2 card and Joystick/MIDI bracket*.

Featuring 24-bit/192 kHz audio playback, Sound Blaster Audigy 2 delivers high-definition sound of astounding quality and 24-bit/96 kHz audio recording capability from all Line Ins and SPDIF In. Sound Blaster Audigy 2 supports surround sound audio on your computer and has output capabilities for 6.1 Dolby Digital Surround EX.

As a THX®-Certified product, Sound Blaster Audigy 2 has passed some of the most stringent and rigorous audio quality and performance tests in existence. THX is renowned in the entertainment industry for its knowledge and expertise of audio-visual systems, and its certification programs are designed to ensure that products bearing the THX logo will each deliver an excellent media experience.

The Sound Blaster Audigy 2 card, with its Audigy 2 processor, enables awesome EAX® ADVANCED HD™ technologies for your gaming and music listening experience. The SB1394™/FireWire® port provides easy high-speed connectivity to NOMAD® portable digital audio players, external CD-RW drives, and other IEEE 1394 compatible devices like DV camcorders, printers, scanners, and digital still cameras.

Combine Sound Blaster Audigy 2 with our rich software package for hours of endless fun. Included in your Sound Blaster Audigy 2 Installation and Applications CD are the latest generation drivers and software for you to enjoy DVD-Audio entertainment with native MLP (Meridian Lossless Packing) support, and to create EAX-enhanced MP3 songs, which you can share with your friends over the Internet.

MLP (Meridian Lossless Packing), the method of audio data compression used in DVD-Audio, reduces file size without removing any of the information that was contained in the original recording. The listening audience will hear the audio as it was intended in the original recording. Other packing methodologies that remove data as part of the compression are referred to as “Lossy Compression”.

*Available with some models of the Sound Blaster Audigy 2 card.
What is EAX ADVANCED HD?

EAX ADVANCED HD brings a new level of performance, power, and flexibility to PC audio. Taking advantage of the enhanced processing capabilities of the Sound Blaster Audigy 2 processor, EAX ADVANCED HD delivers a host of new features that achieve high definition audio for gaming and music enhancement.

The all-new EAX ADVANCED HD Game Audio Library takes in-game audio and acoustic simulation to a whole new level. These innovative technologies bring tremendous realism and total audio immersion for PC gaming:

- **New Multi-Environment™** technology renders up to 4 simultaneous audio environments in real time.
- **Environment Panning™** makes it easy for gamers to track with three-dimensional precision, the location and movement of sounds that usually represent enemies or team mates. This gives Sound Blaster Audigy 2 gamers a better advantage as they are more "attuned" to the game scenario.
- **Environment Reflections™** offers localization of early reflections and echoes.
- **Environment Filtering™** accurately simulates the propagation of sound in both open and closed environments.
- **Environment Morphing™** allows for seamless transition from one environment to the next.

EAX ADVANCED HD Music Technologies also assures sonic superiority.

- **Audio Clean-Up** enables the removal of unwanted noise in a digital audio file.
- **Time Scaling** speeds up and slows down music with no distortion.
- **EAX ADVANCED HD** music effects, developed especially for music listening, further enhance playback of songs.

EAX ADVANCED HD offers dramatically increased 3D audio performance and functionality. Delivering superior audio fidelity and sophisticated reverb effects, this unsurpassed digital entertainment experience is available only from the Sound Blaster Audigy 2 family of products.
Package Contents

The following items are included with the Sound Blaster Audigy 2 package:

- Sound Blaster Audigy 2 card
- Joystick/MIDI bracket*
- Digital CD audio cable*
- Sound Blaster Audigy 2 Installation and Applications CD
- Quick Start Leaflet*
- User Manual (on CD)*
- Sound Blaster Audigy 2 Feature Showcase Demo CD
- Creative DVD-Audio Sampler Disc
- Warranty (printed or on CD)*
- Technical Support (printed or on CD)*

*Available with some models of the Sound Blaster Audigy 2 card.

System Requirements

Sound Blaster Audigy 2 card

- Genuine Intel® Pentium® II 350 MHz, AMD® K6 450 MHz or faster processor
- Intel, AMD or 100%-Intel compatible motherboard chipset
- 64 MB RAM for Windows 98 SE and Windows Me
  128 MB RAM for Windows 2000 SP2 and Windows XP
- 600 MB of free hard disk space
- Available PCI 2.1 compliant slot for the Sound Blaster Audigy 2 card
- Available adjacent slot for the Joystick/MIDI bracket*
- Headphones or amplified speakers (available separately)
- CD-ROM drive installed

*Available with some models of the Sound Blaster Audigy 2 card.
SB1394/FireWire applications, games or DVD viewing

- Genuine Intel Pentium II 350 MHz or AMD 450 MHz processor for SB1394/FireWire applications or games
- **SB1394/FireWire**: Minimum 128 MB RAM for digital video (DV) capture and editing recommended, Ultra DMA hard disk with 1 GB workspace (ATA-100, 7,200 rpm type and 6 GB recommended) for DV applications
- **Games**: At least 128 MB RAM recommended, 3D graphics accelerator with at least 8 MB of texture RAM, available 300–500 MB of free hard disk space
- **DVD**: At least second generation DVD-ROM drive with these recommended soft-DVD players: InterVideo’s WinDVD 2000 or CyberLink’s PowerDVD 3.0 or later
- **DVD-Audio**: Requires genuine Intel Pentium III or AMD Athlon™ 1 GHz or faster, 256 MB for Windows 2000 SP3 and Windows XP SP1, and a second generation DVD-ROM drive 6X or higher.

**Minimum 256 MB RAM recommended for Windows 2000 SP3 and Windows XP SP1 users for games and DV capture and editing.**

Internet Multimedia and Entertainment

- **Internet Radio**: Requires at least a 56 kbps modem and an active Internet connection to run the application.
- Other applications may have higher system requirements or may require a microphone. Refer to the application’s online Help documentation for details.

Getting More Information

Refer to the Sound Blaster Audigy 2 Getting Started Demo and the various online Help files for detailed information on Creative applications. The Sound Blaster Audigy 2 Feature Showcase Demo gives you an interactive introduction to Sound Blaster Audigy 2 and demonstrates the card’s capabilities.

More Help

Technical Support

The following typographical conventions are used throughout this manual:

- The notepad icon indicates information that is of particular importance and should be considered before continuing.
- The alarm clock designates a caution or warning that can help you avoid situations involving risk.
- The warning sign indicates that failure to adhere to directions may result in bodily harm or life-threatening situations.
Installing Hardware

This chapter tells you how to install the Sound Blaster Audigy 2 hardware.
Installing Hardware

What You Need

Before you begin installation, be sure that you have these:

- Sound Blaster Audigy 2 card
- Joystick/MIDI bracket*
- Digital CD audio cable*
- Phillips-head screwdriver (not included)

In addition, you will also need an available PCI slot and another adjacent available slot on your computer.

*Available on some models of the Sound Blaster Audigy 2 card.
Your Sound Blaster Audigy 2 Card

In Analog mode, the Line Out, Rear Out and Rear Center Out jacks are used simultaneously for 6.1 channel speaker systems.

Click any circled number in the diagram for a description of the item.

Your audio card has these jacks and connectors to enable the attachment of a wide variety of devices:

Your Joystick/MIDI Bracket

*Available with some models of the Sound Blaster Audigy 2 card.

The Joystick/MIDI bracket* is used to attach a joystick or MIDI device:

Figure 1-2: Connector on the Joystick/MIDI bracket.
Installation Steps

Step 1: Prepare your computer

1. Turn off your computer and all peripheral devices.
2. Touch a metal plate on your computer to ground yourself and to discharge any static electricity, and then unplug the power cord from the wall outlet.
3. Remove the computer cover.
4. Remove the metal brackets from two adjacent unused PCI slots as shown in Figure 1-3. Put the screws aside for use later.

![Figure 1-3: Removing metal plates]

- A: metal bracket
- B: PCI slot
- C: ISA slot (may not be present on your computer)

Turn off the main power supply and disconnect your computer’s power cord. Systems using an ATX power supply unit with soft power off may still be powering the PCI slot. This can damage your audio card when it is inserted into the slot.

Remove any existing audio card or disable the onboard audio chipset. For more information, see “Problems with Multiple Audio Devices” on page B-9.
Step 2: Install the Sound Blaster Audigy 2 card

1. Align the Sound Blaster Audigy 2 card with the PCI slot and press the card gently but firmly into the slot as shown in Figure 1-4.

2. Secure the card with one of the screws you had placed aside earlier.

Figure 1-4: Securing the audio card to the expansion slot.

Do not force the audio card into the slot. Make sure that the gold finger PCI connector on the Sound Blaster Audigy 2 card is aligned with the PCI bus connector on the motherboard before you insert the card into the PCI expansion slot. If it does not fit properly, gently remove it and try again.
Step 3: Install the Joystick/MIDI bracket

1. If you are installing a joystick or MIDI device (optional), secure the Joystick/MIDI bracket* to the slot next to the Sound Blaster Audigy 2 card with the second screw.

2. Connect the Joystick/MIDI cable* to the Joystick/MIDI connector on the Sound Blaster Audigy 2 card as shown in Figure 1-5.

*Available with some models of the Sound Blaster Audigy 2 card.

Do not force any cable into a connector. This can cause permanent damage to your hardware.

Figure 1-5: Securing the audio card to the expansion slot.
Step 4: Connect cables to Sound Blaster Audigy 2 card

- If the Sound Blaster Audigy 2 card is connected to both the CD_SPDIF and CD Audio connectors on a CD-ROM or DVD-ROM drive, do not enable the CD Audio and CD Digital options at the same time in Creative Surround Mixer.
- Analog and Digital CD audio cables are not needed when CDAA is used.
- The CD_SPDIF connector is not used with software DVD players.

For analog CD audio output:

- Connect an Analog CD audio cable (available separately) from the Analog Audio connector on your CD-ROM/DVD-ROM drive to the CD_IN connector on the Sound Blaster Audigy 2 card as shown in Figure 1-6.

For digital CD audio output:

- Connect the Digital CD audio cable (included with some models) from the Digital Audio connector on your CD-ROM/DVD-ROM drive to the CD_SPDIF connector on the Sound Blaster Audigy 2 card as shown in Figure 1-6.

Figure 1-6: Connecting analog/digital audio cables to CD-ROM/DVD-ROM drives.

Installing Hardware 1-9
Step 5: Connect to power outlet

1. Replace the computer cover.
2. Plug the power cord back into the wall outlet, and turn on the computer.

To connect your Sound Blaster Audigy 2 card to other devices, see “Connecting Related Peripherals” on page 1-11.

To install drivers and software, refer to “Installing Drivers and Applications” on page 2-1.
Sound Blaster Audigy 2 will give you endless hours of listening pleasure. Figure 1-7 shows you how to connect related peripherals to your Sound Blaster Audigy 2 to optimize your enjoyment.

Connecting Related Peripherals

Use the AD_EXT cable with the Audigy 2 Drive ONLY. Do not attempt to use a conventional IDE cable or any other cable with the Audigy 2 Drive as that may cause electrical shorts and permanent damage to the Audigy 2 card and Audigy 2 Drive, which will void the warranty for this product. Your computer may potentially be damaged too.

Click any circled number in the diagram for a description of the item.

Connecting Speaker Systems

If you have a 5.1 channel speaker system, you can upmix your stereo sources (such as CD Audio, MP3, WMA, MIDI, and Wave) to 6.1 channels by using Creative Multi-Speaker Surround (CMSS) technology. To upmix, you need to enable the CMSS feature in Creative EAX console. Refer to the Creative EAX Console online Help.

*For example, Creative Inspire 6.1 Analog Speakers.

Click any circled number in the diagram for a description of the item.

You can use a 4-pole Digital Video A/V cable (not included) to connect Line Out 3 to available center, subwoofer and rear center channels.

Additional information for advanced users:
For connection to Center and Subwoofer channels using a 3.5mm (stereo)-to-RCA cable or 3.5mm (4 pole/stereo)-to-RCA cable, connect the white RCA jack to the Center input and the red RCA jack to the Subwoofer input of the amplifier.

Positioning Your Speakers

If you are using six speakers, place them to form a circle around you (as in Figure 1-10) and angled toward you. Make sure that the computer monitor is not blocking the path of your front speakers. You may want to adjust the relative positions of the speakers until you get the audio experience you like best. If you have a subwoofer, place the unit in a corner of the room for the best bass experience.

2 Installing Software

This chapter tells you how to install the Sound Blaster Audigy 2 software.
Installing Software

Installing Drivers and Applications

You need to install device drivers and applications prior to using your Sound Blaster Audigy 2. To install these drivers and the selected software applications, use the following instructions. The instructions are applicable to all supported Windows operating systems.

1. After you have installed the Sound Blaster Audigy 2 card and Joystick/MIDI bracket*, turn on your computer. Windows automatically detects the audio card and device drivers.
2. When prompted for the audio drivers, click the Cancel button.
3. Insert the Sound Blaster Audigy 2 Installation and Applications CD into your CD-ROM drive. If the drive supports Windows AutoPlay mode, the CD starts running automatically. If not, you need to enable your CD-ROM drive’s auto-insert notification feature. For more details, see “Problems Installing Software” on page B-1.
4. Follow the instructions on the screen to complete the installation.
5. When prompted, restart your computer.

To feel the audio card’s awesome gaming, music reproduction and home studio capabilities, install the Sound Blaster Audigy 2 Feature Showcase Demo. This demo requires high-quality 5.1/6.1 speaker for optimal listening experience. See “Sound Blaster Audigy 2 Feature Showcase Demo” on page 2-2.

*Available with some models of the Sound Blaster Audigy 2 card.
1. Insert the Sound Blaster Audigy 2 Feature Showcase Demo CD into your CD-ROM drive. If the drive supports Windows AutoPlay mode, the CD starts running automatically. If not, you need to enable your CD-ROM drive’s auto-insert notification feature. For more details, see “Problems Installing Software” on page B-1.

2. Follow the instructions on the screen to complete the installation, and to run the Demo.

Uninstalling and Reinstalling the Applications and Device Drivers

At times you may need to uninstall or reinstall some or all of the audio card’s applications and device drivers to correct problems, change configurations, or upgrade outdated drivers or applications. The following instructions tell you how to do so in all Windows operating systems.

Before you begin, close all audio card applications. Applications that are still running during the uninstallation will not be removed.

Reinstalling all Audio Drivers and Applications

If you think the audio drivers and applications are corrupted, you may want to reinstall all of them. To do so:

1. Click Start -> Settings -> Control Panel.
2. Double-click the Add/Remove Programs icon.
3. Click the Install/Uninstall tab (or Change or Remove Programs button).
4. Select the Sound Blaster Audigy 2 entry, and then click the Add/Remove (or Change/Remove) button.
5. In the InstallShield Wizard dialog box, select the Repair check box, and then click the Next button. If prompted, insert the Sound Blaster Audigy 2 Installation and Applications CD into your CD-ROM, and click the OK button.
6. Click the Yes button.
7. Restart your computer when prompted.

You can now check the computer to see if the reinstalled software works properly. If not, proceed to “Troubleshooting and FAQs” on page B-1.
Uninstalling all Audio Drivers and Applications

For a cleaner installation, you may want to uninstall all the audio drivers and applications before you reinstall them again. To do so:

1. Click Start -> Settings -> Control Panel.
2. Double-click the Add/Remove Programs icon.
3. Click the Install/Uninstall tab (or Change or Remove Programs button).
4. Select the Sound Blaster Audigy 2 entry, and then click the Add/Remove (or Change/Remove) button.
5. In the InstallShield Wizard dialog box, select the Remove check box, and then click the Next button.
6. Click the Yes button.
7. Restart your computer when prompted.

You may now install existing or updated Sound Blaster Audigy 2 device drivers or applications. For more information, see “Installing Drivers and Applications” on page 2-1.

Installing/Uninstalling selected Audio Drivers or Applications

The above instructions help you to install or uninstall all device drivers or applications. However, you can also install or uninstall selected drivers or applications.

You may want to install/uninstall a selected audio driver or application. To do so:

1. Click Start -> Settings -> Control Panel.
2. Double-click the Add/Remove Programs icon.
3. Click the Install/Uninstall tab (or Change or Remove Programs button).
4. Select the Sound Blaster Audigy 2 entry, and then click the Add/Remove (or Change/Remove) button.
5. In the InstallShield Wizard dialog box, select the Modify check box, and then click the Next button.
6. Click the check box of the application that you want to uninstall to clear it.
   If you want to install an application, click the application check box to select it.
7. Click the Next button.
   If prompted, insert the Sound Blaster Audigy 2 Installation and Applications CD into your CD-ROM, and click the OK button.
8. Restart your computer when prompted.

To uninstall a selected component in Creative MediaSource, do the following:
1. Click **Start** -> **Settings** -> **Control Panel**.
2. Double-click the **Add/Remove Programs** icon.
3. Click the **Install/Uninstall** tab (or **Change or Remove Program**s button).
4. Select the **Creative MediaSource** entry, and then click the **Add/Remove** (or **Change/Remove**) button.
5. Click the check box of the application that you want to uninstall to clear it.
6. Click the **Next** button.
7. Restart your computer when prompted.

**Updating Windows 2000 (Service Pack 2)**

Windows 2000 now provides better support for AC-3 SPDIF output (non-PCM through waveOut) for software DVD viewing. Click the web site link below to download the Windows 2000 Service Pack 2 to enjoy this support and to fix other issues in the Windows 2000 OS.

http://www.microsoft.com

**Updating Windows 98 SE**

If you have installed DirectX 8.0 or 8.0a run time, install the latest update for this application. (DirectX 8.1 users do not need the update.)

This update provides PAL support and improved device support to 1394 Digital Video equipment users. This is applicable for Windows 98 SE and Windows 2000 users. This update provides minor improvement to the Windows Me OS. To look for this update, go to the web site below.

Three demo packages have been included to showcase the basic as well as the advanced features of your Sound Blaster Audigy 2 card. We recommend that you play them at least once in order to have a good overview of your card’s features.

This is a good starting point from which you can learn about Sound Blaster Audigy 2. The Sound Blaster Audigy 2 Getting Started Demo consists of several interactive and informative demos that highlight different aspects of Sound Blaster Audigy 2: experiencing digital music and digital gaming, watching movies, connecting speakers, and performing tasks.

Use the Sound Blaster Audigy 2 Feature Showcase Demo to feel the audio card’s awesome gaming, music reproduction and home studio capabilities.

Experience the following exciting features of the new Sound Blaster Audigy 2:

- DVD-Audio Playback — Learn more about this new, high-resolution music format and experience the difference when a DVD-Audio clip is being played.
- EAX ADVANCED HD technologies — Experience complex multi-environment audio effects as you navigate through a fascinating virtual 3D world. Run this demonstration and experience EAX ADVANCED HD technologies such as Environment Panning, Environment Reflection and Environment Morphing. Compare the scenes with and without EAX ADVANCED HD, and you will understand why more game developers are using EAX ADVANCED HD technologies for the best gaming experience.
- Dolby Digital Surround EX Support — Listen to a THX audio demonstration containing an additional rear channel (rear center) that produces a richer and more consistent surround effect than that of systems with only two rear channels.

**Note:** The Sound Blaster Audigy 2 Feature Showcase Demo can be installed using the Sound Blaster Audigy 2 Feature Showcase Demo CD in your package. This demo will run only if a Sound Blaster Audigy 2 card is installed because the software utilizes the card’s hardware capabilities for the demonstrations.
SoundFont Showcase

SoundFont Showcase contains a wide and comprehensive range of downloadable SoundFont demos from companies like Sonic Implants and Voice Crystal. You can also learn how to create and manage your own SoundFont banks in here.

Introduction to the Sound Blaster Audigy 2 software suite

Creative MediaSource Go!

Creative MediaSource Go! is a convenient launch pad, not only for Creative MediaSource's components, but also for your own frequently used applications. If you have desktop shortcuts for your favorite applications, you can place them in one central location, Creative MediaSource Go!

The Creative MediaSource Go! button launches Creative MediaSource Go! Launcher. Creative MediaSource Go! floats on your desktop as a small profile bar. Clicking a button on the bar causes it to expand horizontally into a shortcut bar. Creative MediaSource Go! Launcher contains icons that launch the various MediaSource modules for controlling Sound Blaster Audigy 2. You can also add your own shortcut icons to Creative MediaSource Go!.

For more information and usage details on Creative MediaSource Go!, refer to its online Help.

Creative MediaSource Go! Launcher

Just like the Start button in Windows, Creative MediaSource Go! Launcher provides a single point of access to most of the software programs you need, to control and customize Sound Blaster Audigy 2.

Creative MediaSource Go! Launcher consists of four tabs: Programs, Product Settings, Product Support and Companion Products.
Questions are subjective; answers are objective.

Creative MediaSource Player

Creative MediaSource Player is the only software you will need for music and multimedia entertainment. Unlike other media players, Creative MediaSource Player is specially designed to access the power of your Sound Blaster Audigy 2 card. With it, you can:

- play back music and multimedia files: MP3, WAV, WMA, NVF, MLP, Video CD, etc
- enhance playback of ordinary music with surround effects using EAX
- vary the speed of audio playback without affecting the pitch (Time Scaling)
- use Smart Volume Management to play back a list of songs at a similar volume level even if they were originally recorded at different loudness levels
- Switch between Creative MediaSource Organizer and Creative MediaSource Player with just a click of the mouse.
- Use the built-in Creative MediaSource Recorder to record audio (see the section below).

For extra convenience, you can switch between Creative MediaSource Organizer and Creative MediaSource Player with just a click of the mouse. For more information and usage details on Creative MediaSource Player, refer to its online Help.

“What U hear” multichannel recording

Use Creative MediaSource Recorder to record at up to 24-bit/96 kHz from any audio sources processed by the Sound Blaster Audigy 2 card. A multichannel What-U-Hear recording mode lets you capture audio directly from the audio card's 6.1-channel analog speaker outputs, without the need to connect any

For more information and usage details on Creative MediaSource Go! Launcher, refer to its online Help.

Programs houses shortcuts to Sound Blaster Audigy 2 applications. You can also add your own shortcuts to other applications.

Product Settings houses shortcuts to specific programs for changing Sound Blaster Audigy 2's hardware settings.

Product Support contains diagnostic software, product update information, product registration forms, demonstration software as well as helpful documentation such as Getting Started guides.

Companion Products allows viewing of information on other Creative products and applications.
cables to the Line Out connectors. You can then capture surround-sound movie/gameplay audio, and even audio content enhanced or upmixed with CMSS and EAX effects. For more information and usage details on Creative MediaSource Player and Recorder, refer to its online Help.

Managing a huge collection of audio CDs and MP3 files can be a headache. With Creative MediaSource Organizer, you can find any recording easily, no matter where it is stored on your hard disk or external storage devices. The following is a list of tasks you can perform with Creative MediaSource Organizer.

**Finding and organizing songs**

Creative MediaSource Organizer searches your hard disk to compile a database of songs available, called a “PC Music Library” or PCML. Once you have a PCML, you can sort it and search for songs. Searching is very fast due to a sophisticated engine and use of three search fields: artist, genre and album.

Once songs have been found, you can create playlists to automatically replay them in any desired sequence. You can also enter and edit extra information about each MP3 recording with ID3 tags.

**Keep your music database up to date**

As songs are added or deleted from your computer and other storage devices, your PCML will need to be kept up to date. The Media Sniffer will monitor specified folders on your hard disk for file changes, and update your PCML accordingly.

**Transferring songs**

NOMAD users can use Creative MediaSource Organizer to transfer music files to and from the computer and other compatible devices.

**Automatically playing multimedia content**

Media Detector makes it easy for users to access multimedia content from various internal or external media. There is no need to hunt through a maze of different software to play different types of files.

Media Detector automatically recognizes the insertion or connection of CDs, VCDs, and external devices like the NOMAD Jukebox and NOMAD MP3 players. Upon recognition, the content in the media will automatically start playing without further intervention from the user.
Extracting and converting songs

Storing hundreds of songs on your computer can consume much hard disk space. WAV files and tracks from audio CDs can take up to 50 MB per song. To reduce storage on your hard disk, you can convert tracks from audio CDs into smaller 4 to 5 MB MP3 files. Creative MediaSource Organizer’s built-in Rip Now module lets you easily extract tracks from audio CDs, then convert them to MP3 and WMA formats at high resolution bit rates of 320 Kbps and 160 Kbps, respectively.

To eliminate the need for you to manually type the track information of an audio CD’s ripped tracks, a feature called CDDB can connect your computer to the Internet (Gracenote’s CDDB service) and automatically retrieve the track names and other useful track information for you.

Storing music on recordable CD

If you have a CD-writer, another way to reduce music storage on your computer’s hard disk is to record audio tracks onto CD-R or CD-RW for playback on many consumer hi-fi devices. Creative MediaSource Organizer’s Burn CD module lets you create your own audio and MP3 CDs from WAV, MP3 and WMA files. The Burn CD feature also lets you easily design, create, and print matching CD covers and liner notes for your audio CDs.

For more information and usage details on Creative MediaSource Organizer, refer to its online Help.

Creative MediaSource DVD Audio Player

Use this application to play back today’s highest quality audio recordings available on DVD-Audio discs. You can enjoy music 24-bit/96 kHz multichannel surround-sound music, or stereo recordings of up to 24-bit/192 kHz resolution. A Pentium III/AMD Athlon 1 GHz or faster processor is recommended. Requires 256 MB RAM for Windows 2000 SP3 or Windows XP SP1. Also requires a second-generation 6x or faster DVD-ROM drive. Visit www.soundblaster.com for updates on OS-specific support issues.

Creative EAX Console

Creative EAX Console allows you to configure the Audigy 2 processor's effects engine.

Creative EAX Console promises to deliver sounds that are so life-like, you can almost see them! It is the computer industry's first system to recreate and deliver real-world, interactive audio experiences in games, music, and other audio applications. These audio effects take your computer beyond home-theater quality, immersing you in sound so vivid, your imagination can almost “see” it. The effects go beyond today’s surround sound and 3D positional audio, to actually model an environment by taking into account room size, acoustic properties, reverb, echo, and many other effects that create a real-world experience.
Creative EAX Console consists of four sections: **Audio Effects, CMSS 3D, Audio Clean-up, and Time Scaling**.

**Audio Effects:**

- **Environmental Sound Processing**
  - In Audio Effects, you can choose how you want to enhance all kinds of ordinary two-channel sounds.
  - **Advanced EQ** lets you boost or de-emphasize the low, mid or high frequencies of sound to suit individual preference and equipment characteristics. Choose various presets like Jazz or Rock to suit the audio characteristics you like best.
  - **Special Effects** let you modify sounds with pre-programmed algorithms so that male voices can be turned into female voices, or human speech turned into “chipmunk talk”. You can have lots of fun, especially when communicating over the Internet.
  - **Studio Effects** can add standard distortion, wah, delays and chorus effects to an electric guitar or other musical instrument.
  - **Environmental Effects** simulate typical acoustic environments like stadiums, concert halls, and jazz clubs. By choosing an effect like “concert hall”, you can make any music sound like it is being produced inside a concert hall, with all the characteristic echos and reverberation. Various settings let you vary the type of effect, amount of effect applied, and others. If you have connected rear speakers to your computer, EAX will trick your ears into believing that your room has turned into a concert hall or jazz club. EAX becomes more effective as the number of speakers connected is increased. It supports up to 6 speakers and one subwoofer.
  - **Karaoke Effects** let singers add high-quality echo to add richness to their voices. Users can also vary the music’s pitch to suit their vocal range.

**CMSS 3D: Simulating Surround Sound**

- Creative MultiSpeaker Surround (CMSS) 3D makes ordinary two-channel (Left and Right Stereo) sound seem to surround you, even through only two speakers. For users with 5.1 or 6.1 multichannel speaker systems, CMSS can also simulate surround sound from ordinary stereo. This is useful for watching DVDs and VCDs, which contain only stereo soundtracks.

Select CMSS for multichannel audio enhancement on 4/4.1, 5.1 or 6.1 speaker systems, and CMSS2 for movies.
Note: For a 4/4.1-speaker system, audio for your subwoofer is processed by the speaker system.

Audio Clean-up: Removing noise and distortion
Audio Clean-up allows you to process prerecorded as well as real-time audio, in order to remove noise, click sounds and other artifacts. For example, when recording music from old vinyl records, “click” and “pop” sounds can be removed with the Clean-up feature. The Click Meter informs you whenever the noise clean-up feature is activated during recording and also how many clicks are removed.

Time Scaling: Varying the speed of playback
Karaoke fans and musicians may sometimes wish to slow a song down (or speed it up) to catch the lyrics or play along with the music. However, varying the speed usually also varies the pitch of the song. With the Time Scaling feature, Sound Blaster Audigy 2 users can maintain the pitch of a song while varying the playback speed.

For more information and usage details on EAX ADVANCED HD, refer to the Creative EAX online Help.

Creative Surround Mixer
Use Creative Surround Mixer to select the device you wish to listen to or record from. It operates in two possible modes. Click the Basic Mode or Advanced Mode button to switch between the two modes:

In Basic mode, you can:
- mix sounds from various audio input sources when playing or recording
- control volume, bass and treble

In Advanced mode, you can:
- control balance and vary the loudness ratio between front/rear speakers (fader)
- control the relative loudness levels between Front Center, Rear Center and Subwoofer speakers (if any)

For more information and usage details on Creative Surround Mixer, refer to its online Help.

Creative Speaker Settings
This is the main application to use for the following tasks:
- Designating the number and configuration of speakers to use
- Testing your speakers
- Activating or deactivating Digital Output
- Managing bass output by selecting subwoofer crossover frequency and volume
Creative Speaker Calibrator

Creative Speaker Calibrator assists you in optimizing loudspeaker settings and positioning to create much better surround sound and gaming sound effects.

Creative MiniDisc Center

Creative MiniDisc Center allows you to play back songs on CDs or supported audio formats, and record them to digital recorders such as Digital Audio Tape machines, and also MiniDisc (MD) recorders.

With Creative MiniDisc Center, you can:
- create an album of your favorite songs, each of which may be in a different audio format
- insert a preset period of silence automatically between each track
- play back your personal album and record it to your MD recorder

For more information and usage details on Creative MiniDisc Center, refer to its online Help.

Creative SoundFont Bank Manager

You can use Creative SoundFont Bank Manager to easily switch between multiple SoundFont banks for performances. This module is optimized to let users quickly audition various presets, reset MIDI devices, or create/modify/save various SoundFont banks from your computer’s RAM. Creative SoundFont Bank Manager also switches the Drum Kit on or off at Midi Channel 10.

A virtual keyboard is provided for the user to use the computer’s keyboard or mouse to audition SoundFont banks or play musical notes produced through MIDI devices. To edit the presets in the SoundFont banks, use Vienna SoundFont Studio, which you can download from http://www.SoundFont.com.

You can use external MIDI input devices to audition your MIDI banks and instruments. First, connect a MIDI input device to your audio card and then select that device in the Creative SoundFont Bank Manager. Once you discover the power of SoundFont technology, you will be amazed at the sound design possibilities available.

For more information and usage details on Creative SoundFont Bank Manager, refer to its online Help.
Using Audigy 2 Software 3-10

Creative Audio Stream Recorder 2

Normally, to listen to a song on the Internet, you need to download the entire file onto your hard disk first — before you can even hear the music.

Internet radio stations can, however, make it more convenient for you to enjoy downloaded music: they employ “streaming” technology by which music data flows like a “stream” to your audio card directly, bypassing permanent hard disk storage. Thus, the song starts to play as soon as a portion of its data stream has arrived at your audio card. The downside of streaming technology was that you could not record the music onto your hard disk for future reference.

Audio Stream Recorder 2 (ASR2) is designed to overcome this problem by letting you record streaming audio onto your hard disk as standard MP3 or WMA files.

To use ASR2, select from its predefined list of radio stations to listen to. You can click the red Record button to start recording music to your hard disk, or use the Schedule feature to program the computer to record streaming music unattended. You can also use ASR2 to listen to selected radio stations live by clicking the blue Play button.

For more information and usage details on Creative Audio Stream Recorder 2, refer to its online Help.

Creative Wave Studio

When you need to edit sound files, use Creative Wave Studio. This application supports popular file formats like WAV and AIFF. With Wave Studio, you can convert between file formats and edit out any section of sound. Apply effects like fade-in/fade-out. You can also use it to blend two or more songs into a single file.

For more information and usage details on Creative Recorder, refer to its online Help.
Diagnostic and troubleshooting utilities

Creative Diagnostics
Use Creative Diagnostics to quickly test your audio card’s Wave, MIDI or CD Audio playback capability, recording function and speaker output. For more information and usage details on Creative Diagnostics, refer to its online Help.

Creative Speaker Settings
This is the main application to use for managing your speakers and troubleshooting problems related to speaker configurations. See “Creative Speaker Settings” on page 3-8.

THX Certification

Sound Blaster Audigy 2 has received the prestigious THX® Multimedia Certification award, making it the perfect choice for PC audiophiles seeking the very best music and movie experiences.

Dolby Digital (AC-3) Decoding

❑ Decodes Dolby Digital Surround EX to 6.1 or 5.1 channels or pass-through compressed SPDIF bitstream to an external decoder
Bass redirection: enhances bass output to subwoofer for small satellite speaker systems
Crossover bass frequency (10–200 Hz): adjustable to standalone subwoofer units for desired bass level
Adjustable Center, Rear Center and LFE level control

Creative Multi Speaker Surround (CMSS)
- Multispeaker technology
- Upmixes mono or stereo sources to 6.1 channels
- Professional-quality panning and mixing algorithm

SB1394/FireWire Compatibility
- Compliant to IEEE 1394a specification
- Supports data rates of 100, 200, and 400 Mbps
- Supports up to 63 IEEE 1394 compatible devices in a daisy-chain configuration
- Supplies up to 3 watts to IEEE 1394 compatible devices

Connectivity

Sound Blaster Audigy 2 card

Audio Inputs
- One line-level analog Line input via stereo jack on rear bracket
- One mono Microphone analog input via stereo jack on rear bracket
- CD_IN line-level analog input via 4-pin Molex connector on card
- AUX_IN line-level analog input via 4-pin Molex connector on card
- TAD line-level analog input via 4-pin Molex connector on card
- CD_SPDIF digital input via 2-pin Molex connector on card

Audio Outputs
- ANALOG/DIGITAL OUT via 4-pole 3.5 mm minijack on rear bracket
  - ANALOG OUT: Center and Subwoofer channels
• DIGITAL OUT: Front, Rear, Center and Subwoofer SPDIF digital outputs
  ❑ Three line-level analog outputs via 3.5 mm minijacks on rear bracket: front, rear, and rear center/center/subwoofer Line-Outs 1, 2 and 3
  ❑ Stereo headphone (32-ohm load) support on Front Line-Out

SB1394/FireWire Interfaces

❑ One 2 x 5 pin Internal SB1394/FireWire connector on card
❑ One 6-pin SB1394/FireWire port on rear bracket

⚠ The 6-pin SB1394/FireWire connector/port has a 3 watt maximum power output. Connect only one high power usage device such as the IEEE 1394 hard disk and CD-RW drive to this port unless it is self-powered.

Interfaces

❑ AD_EXT 2 x 20 pin header for connection to Audigy 2 Drive
❑ JOYSTICK 2 x 8 pin header* for connection to the Joystick/MIDI connector (optional attachment)

Troubleshooting and FAQs

This appendix provides solutions to problems you may encounter during installation or normal use.

Problems Installing Software

The installation does not start automatically after the Sound Blaster Audigy 2 Installation and Applications CD is inserted.

The AutoPlay feature in your Windows system may not be enabled.

To start the installation program through the My Computer shortcut menu:
1. Double-click the My Computer icon on your Windows desktop.
2. In the My Computer window, right-click the CD-ROM drive icon.
3. On the shortcut menu, click AutoPlay and follow the instructions on the screen.

To enable AutoPlay through Auto Insert Notification:
1. Click Start -> Settings -> Control Panel.
2. In the Control Panel window, double-click the System icon.
3. In the System Properties dialog box, click the Device Manager tab and select your CD-ROM drive.
4. Click the Properties button.
5. In the Properties dialog box, click the Settings tab and select Auto Insert Notification.
6. Click the OK button to exit from the dialog box.
Problems with Sound

There is unexpected excessive environmental sound or effects when an audio file is played.
The last selected preset is an inappropriate environment for the current audio file.

To switch to an appropriate environment:
1. Click the Audio Effects tab in EAX Console.
2. Click the Enable/Disable Audio Effects check box to clear it.
   Note: The preset box title may change, depending on the effect you select.

No sound from the headphones.

Check the following:
- The headphones are connected to the Headphones jack.
- In the Speaker Selection tab of Creative Speaker Settings, the Headphones option is selected in the Speaker/Headphone Selection box.
- In the Basic tab of Creative Surround Mixer, the recording source selected is “What U Hear”.

Individual analog recording sources are not displayed in Creative Surround Mixer.

The following analog recording sources are combined in one recording control called Analog Mix (Line/CD/TAD/Aux/PC), which is found in the Record panel of the Basic tab:
- Line-In
- CD Audio
- Auxiliary
- TAD-In
- PC Speaker

Individual analog recording sources cannot be selected in Creative Surround Mixer.
Five analog recording sources are combined under the selection Analog Mix (Line/CD/TAD/Aux/PC). For more information, see “Individual analog recording sources are not displayed in Creative Surround Mixer.” on page B-2.
To record an individual analog source:

- In the **Record** panel of the **Basic** tab in Creative Surround Mixer, make sure the recording source selected is **Analog Mix (Line/CD/TAD/Aux/PC)**.
- In the **Source** panel, mute the analog sources that you do not want to record by clicking the **Speaker** button to change it to a button with a **red cross sign** on it.

**No sound from the speakers.**

**Check the following:**

- You have connected your speakers to your card's output.
- You have selected the correct source in the **Source** panel Creative Surround Mixer.
- If both the above conditions have been met and you still do not get any sound, click the **red plus sign** above the **Volume** control and check whether the **Digital Output Only** check box is selected. If it is, you are in the Digital Output Only mode and so must connect to digital speakers to hear the sound from your audio card. See the section on “Speaker Selection Settings” in Creative Speaker Setting’s online Help for more information.

**No audio output when playing digital files such as .WAV, MIDI files or AVI clips.**

**Check the following:**

- The speakers’ volume control knob, if any, is set at mid-range. Use Creative Surround Mixer to adjust the volume, if necessary.
- The powered speakers or external amplifier are connected to the card’s Line Out or Rear Out jack.
- There is no hardware conflict between the card and a peripheral device. See “Resolving I/O Conflicts” on page B-11.
- The Speaker selection in Creative Speaker Settings corresponds to your speaker or headphone configuration.
No audio output when playing audio CDs or DOS games that require a CD-ROM.

To solve this problem:
- Make sure the Analog Audio connector on the CD-ROM drive and the CD In connector on the audio card are connected.
- Enable digital CD playback:
  - For Windows 98 SE
    i. Click Start -> Settings -> Control Panel.
    ii. In the Control Panel dialog box, double-click the Multimedia icon.
    iii. In the Multimedia Properties dialog box, click the CD Music tab.
    iv. Click the Enable digital CD audio for this CD-ROM device check box to select it.
    v. Click the OK button.
  - For Windows Me
    i. Click Start -> Settings -> Control Panel.
    ii. In the Control Panel dialog box, double-click the System icon.
    iii. In the System Properties dialog box, click the Device Manager tab.
    iv. Double-click the DVD/CD-ROM drives icon.
    v. Right-click the disk drive icon. A menu will appear.
    vi. Click Properties.
    vii. In the Digital CD Playback box of the next dialog box, click the Enable digital CD audio for this CD-ROM device check box to select it.
    viii. Click the OK button.
  - For Windows 2000 and Windows XP
    i. Click Start -> Settings -> Control Panel.
    ii. In the Control Panel dialog box, double-click the System icon.
    iii. In the System Properties dialog box, click the Hardware tab.
    iv. Click the Device Manager button.
Troubleshooting and FAQs  B-5

vi. Right-click the disk drive icon. A menu will appear.
vii. Click Properties.
viii. In the Digital CD Playback box of the next dialog box, click the Enable digital CD audio for this CD-ROM device check box to select it.

Panning a source sometimes turns off its sound.

This occurs when you are in the Digital Output Only mode and the source’s left-right balance in a software mixer application other than Creative Surround Mixer (for example, the Windows Volume Control application) is at the opposite end compared to the position to which you have panned the source in the Basic tab of Creative Surround Mixer. For example, the CD Audio balance in Windows Volume Control is on the left but in Creative Surround Mixer you have panned the CD Audio to the right.

To solve this problem:
Open that other mixer, and center the balances for all the audio input sources. This ensures that your analog sources will not turn silent when you pan them in Creative Surround Mixer.

Problems with File Transfers on Some VIA Chipset Motherboards

After you install the Audigy 2 card on a VIA chipset motherboard, you may have the slight chance of seeing one of the following:

When transferring large amounts of data, the computer stops responding (‘hangs’) or restarts itself, OR Files transferred from another drive are incomplete or corrupted.

These problems appear in a small number of computers, which contain the VIA VT82C686B controller chipset on their motherboards.

To verify if your motherboard has the VT82C686B chipset:
❑ Refer to your computer or motherboard manual, or

Troubleshooting and FAQs  B-5
In Windows:

i. Click **Start** -> **Settings** -> **Control Panel**.
ii. Double-click the **System** icon.
iii. Click the **Device Manager** or **Hardware** tab.
iv. Click the **Systems devices** icon.
v. In the list that appears, see if the items highlighted in Figure B-1 appear.

vi. If the items appear, remove your computer cover and locate the VIA chipset on your motherboard. (Take note of the safety precautions on page 1-6.) The VT82C686B chipset has its model number inscribed on the chip.

If you have the VT82C686B chipset:

- Creative recommends that you first contact your computer vendor or motherboard manufacturer for the latest solution.
- Some users have solved the above problems by doing one or both of the following:
  - downloading the latest VIA 4in1 drivers from http://www.viatech.com*,
  - obtaining the most current BIOS for your motherboard from the manufacturer’s web site*.

*Content in these web sites is controlled by other companies. Creative bears no responsibility for information or downloads obtained from them. This information is provided only as a convenience to you.
Insufficient SoundFont Cache

There is insufficient memory to load SoundFont banks.
This may occur when a SoundFont-compatible MIDI file is loaded or played while insufficient memory has been allocated to Creative SoundFont Bank Manager.

To allocate more SoundFont cache:
1. Click the Bank button.
   The Configure Bank dialog box appears.
2. Click the Select Bank drop-down button, and select a bank indices to configure.
3. Click the Load button to add a SoundFont bank to an empty or occupied indices.
4. If the desired space already contains a bank, and you want to load a new bank in its place, highlight the bank and click the Replace button.
5. Click the OK button to finish configuring your banks.

The amount of SoundFont cache you can allocate depends on the system RAM available. Your computer may slow down if the amount of cache used is too high.

If there is still insufficient system RAM available:
Do one of the following:
- In the Configure Bank dialog box of Creative SoundFont Bank Manager, select a smaller SoundFont bank, if available, from the Select Bank box.
- Increase the system RAM on your computer.

Problems with Joystick

The joystick port is not working.
The audio card’s Joystick/MIDI connector may be conflicting with the system’s joystick port.

To solve this problem:
Disable the audio card’s Joystick/MIDI connector and use the system port instead. Do the following:
1. Click Start -> Settings -> Control Panel.
2. In the Control Panel window, double-click the System icon.
3. In the System Properties dialog box, click the Device Manager tab.
4. Double-click **Sound, Video And Game Controllers**, and then select **Creative Audigy 2 Gameport** (*Creative Game Port* for Windows 2000).
5. Click the **Properties** button.
6. In the Properties dialog box:
   - If you have an **Original Configuration (Current)** check box:
     - Clear the check box to disable it.
   - If you have a **Disable In This Hardware Profile** check box:
     - Make sure that the check box is selected to disable it.
7. Click **OK** to restart Windows and for the change to take effect.

When the Gameport Joystick interface is disabled, the entry in Device Manager has a red cross.

**The joystick is not working properly in some programs.**

The program may use the system processor timing to calculate the joystick position. When the processor is fast, the program may determine the position of the joystick incorrectly, assuming that the position is out of range.

*To solve this problem:*

Increase your system’s 8 bit I/O recovery time of the BIOS setting, usually under the Chipset Feature Settings section. Or, if available, you may adjust the AT Bus speed to a slower clock. If the problem persists, try a different joystick.

*Do not attempt to make changes to the BIOS unless you have experience with system software.*
Problems with Multiple Audio Devices

The other installed audio card is not working well.
You may have an existing audio device installed in your computer. The audio device may be an audio card or an onboard audio chipset. Before you install your Sound Blaster Audigy 2 card, you are advised to completely uninstall and remove your existing audio device. Operating multiple audio devices in your computer may introduce usability issues.
Alternatively, during the installation of your Sound Blaster Audigy 2 card, do the following:
- If your computer detects an installed Sound Blaster Live! Series or Sound Blaster PCI512 audio card, a message box recommending that you completely uninstall and remove the older audio device will appear. Click the Yes button and follow the instructions on the screen to complete the removal of the old audio device. Remove the old audio card from your computer.
- If your computer detects any other installed audio card, a message box recommending that you completely uninstall and remove the older audio device will appear. Click the Yes button to continue with the installation of the Sound Blaster Audigy 2 card. After the installation of the Sound Blaster Audigy 2 card, completely uninstall the existing card and remove the audio card from your computer.

The onboard audio chipset is not working well.
To disable an onboard audio chipset, do the following:
1. Restart your system.
2. During the memory check, press <F2> or <Delete>, depending on your motherboard. The BIOS setup menu appears.
3. Select **Chipset Features Setup** and press <Enter>.
4. Select **Onboard Legacy Audio** and press <Enter> to disable your onboard audio chipset.
5. Press <Esc> to return to the BIOS setup menu.
6. Select **Save & Exit Setup**, and then press <Enter>.
7. Press <Y> and then press <Enter>
Problems with Sound Blaster Live! Series or Sound Blaster PCI512 card

Sound Blaster Live! or Sound Blaster PCI512 applications are not working.
Other than normal playback and recording functions, older audio devices may not work well when Sound Blaster Audigy 2 is installed.

To solve this problem:
Uninstall and remove the older card from the computer. Otherwise, you can choose to disable the Sound Blaster Live! or Sound Blaster PCI512 card:
1. Click Start -> Settings -> Control Panel.
2. In the Control Panel window, double-click the System icon.
3. In the System Properties dialog box, click the Device Manager tab.
4. Double-click Sound, Video And Game Controllers, and then select Creative Sound Blaster Live! Series or Creative Sound Blaster PCI512.
5. Click the Properties button.
6. In the Properties dialog box:
   a. If you have an Original Configuration (Current) check box:
      • Clear the check box to disable it.
   b. If you have a Disable In This Hardware Profile check box:
      • Make sure that the check box is selected to disable it.
7. Click OK to restart Windows and for the change to take effect.

When the Sound Blaster Live! series is disabled, the entry in Device Manager has a red cross.
Resolving I/O Conflicts

Conflicts between your audio card and another peripheral device may occur if your card and the other device are set to use the same I/O address.

To resolve I/O conflicts, change the resource settings of your audio card or the conflicting peripheral device in your system using Device Manager in Windows 98 SE/Me.

If you still do not know which card is causing the conflict, remove all cards except the audio card and other essential cards (for example, disk controller and graphics cards). Add each card back until Device Manager indicates that a conflict has occurred.

To resolve hardware conflicts in Windows 98 SE/Me:
1. Click Start -> Settings -> Control Panel.
2. In the Control Panel window, double-click the System icon.
3. In the System Properties dialog box, click the Device Manager tab.
4. Under the Sound, Video And Game Controllers entry, select the conflicting audio card driver—indicated by an exclamation mark (!)—and click the Properties button.
5. In the Properties dialog box, click the Resources tab.
6. Make sure that the Use automatic settings check box is selected, and click the OK button.
7. Restart your system to allow Windows 98 SE/Me to reassign resources to your audio card and/or the conflicting device.

Problems with Encore DVD Player

The Encore DVD Player is not launched when a DVD disc is inserted into the drive.

To solve this problem:
1. In the Windows system tray, right-click the Disc Detector icon, and then click Properties.
2. On the General tabbed page of the Creative Disc Detector dialog box, make sure that the Enable Disc Detector check box is selected.
3. Click the Players tab.
4. Select the DVD Disc entry and then click the Select Player button.
5. In the Players Properties dialog box, click the Browse button.
6. Locate and select D:\Program Files\Creative\PC- DVD Encore (where D: represents your CD-ROM drive) and double-click the entry ctdvdply.
The Name box now displays the entry ctdvdply.
7. Click the OK button twice.

Problems with Software DVD Player

Changing audio configuration (for example, switching from multichannel mode to SPDIF Output mode or vice versa) while watching a DVD movie does not seem to work, even though all settings in the software DVD player and in Creative Surround Mixer are correct.

To solve this problem:
Close and restart the software DVD player.

Problems with DV driver for Windows 98 SE/2000/Me/XP

The DV camcorder is not working properly.
The MSDV camcorder driver may not be the latest version (v4.10.2226).

To solve this problem:
2. Install the above file into your computer.
   Note: You need to install DirectX 8.0 or 8.0a run time first.

If the problem still persists, the MSDV camcorder driver may not be fully optimized for your DV camcorder.

To solve this problem:
1. Turn on your DV camcorder.
2. Insert the Sound Blaster Audigy 2 Installation and Applications CD into your CD-ROM drive.
   Exit from the welcome screen.
3. Using Windows Explorer, locate the 1394 folder in the CD-ROM, and run the DVConnect 240.exe file. Follow the instructions on the screen to complete the setup. If you are in Windows 98 SE, you may be prompted to insert the Windows 98 SE CD-ROM first. Follow the instructions on the screen to complete this setup.

4. Click the Finish button.

5. Turn off and then turn on your DV camcorder.

**A Hardware Installation error message appears on a Windows XP operating system when non-Creative applications are being installed.**

At the time of this product's release, Microsoft strongly encouraged companies to submit their hardware solutions for certification. If a hardware device driver is not submitted, or does not qualify, for Microsoft certification, a warning message similar to the one below appears.

![Hardware Installation Error Message](image)

You may see the message when you install hardware drivers from companies other than Creative. If you do, you may choose to click the Continue Anyway button. Device drivers not signed by Microsoft may be used in Windows XP, and need not impair or destabilize your computer.

Should you need more XP-related information or help, you can contact the company that developed the driver, at the company's web site or helpline.
Problems with Digital Audio Devices

Intermittent hissing or no sound is heard from my digital speakers.

Make sure you select the sampling rate of the PCM SPDIF output of your Digital Out connector to match the requirements of the receiving device. You may need to select a lower digital output sampling rate. The choices available are 48 kHz and 96 kHz.

To solve this problem:
1. In Creative MediaSource Go! Launcher, click the Product Settings tab.
2. Double-click the Device Controls icon.
3. Click the Sampling Rate tab.
4. Click the required sampling rate from the Digital Output Sampling Rate list.

Popping noises is heard during playback.

Check that the DMA feature is selected for all drives.

To solve this problem:
For Windows 98 SE and Windows Me:
1. Click Start -> Settings -> Control Panel.
2. In the Control Panel dialog box, double-click the System icon.
3. In the System Properties dialog box, click the Device Manager tab.
4. Double-click the Disk drives icon.
   Your computer drives will appear.
5. Double-click the hard disk drive icon.
6. In the box that appears, click the Settings tab.
7. Click the DMA (direct memory access) check box to select it.
   An alert message box appears.
8. Click the OK button.
9. Click the OK button in the next box.
10. Click the Close button on the System Properties dialog box.
11. When prompted to restart your computer, click the Yes button.
12. Repeat steps 4-11 if you have other drives, for example, other hard disk drives, CD-ROM, CD-RW, and DVD-ROM drives. In step 4, double-click the respective drive icon.

For Windows 2000 and Windows XP:
1. Click Start -> Settings -> Control Panel.
2. In the Control Panel dialog box, double-click the System icon.
3. In the System Properties dialog box, click the Hardware tab.
4. Click the Device Manager button.
5. Double-click the ATA/ATAPI IDE Controllers icon.
   Your IDE channels will appear.
6. Right-click the Primary IDE Channel icon.
7. Click Properties.
8. In the Properties dialog box, click the Advanced Settings tab.
9. Click the DMA if available check box to select it.
10. Click the OK button.
